Security incident report

Section 1: Identify the network protocol involved in the incident
The network protocol involved is the HTTPS protocol

Section 2: Document the incident
The customers emailed the yummyrecipesforme.com support because of the sudden download of a file and redirecting it to another website. The threat actor has compromised the website since the password of the admin is set by default. He adjusted the website code and input a script that makes you download malware and redirect you to another website.

Section 3: Recommend one remediation for brute force attacks
One remediation is having a two-factor authenticator for the admin on the website with updated password regulations.
